AOV by Category

Customer Distribution (New vs Repeat)

OBSERVATION

97% of customers are new, while only 2% are repeat. This shows that growth is heavily driven by acquisition rather than loyalty.

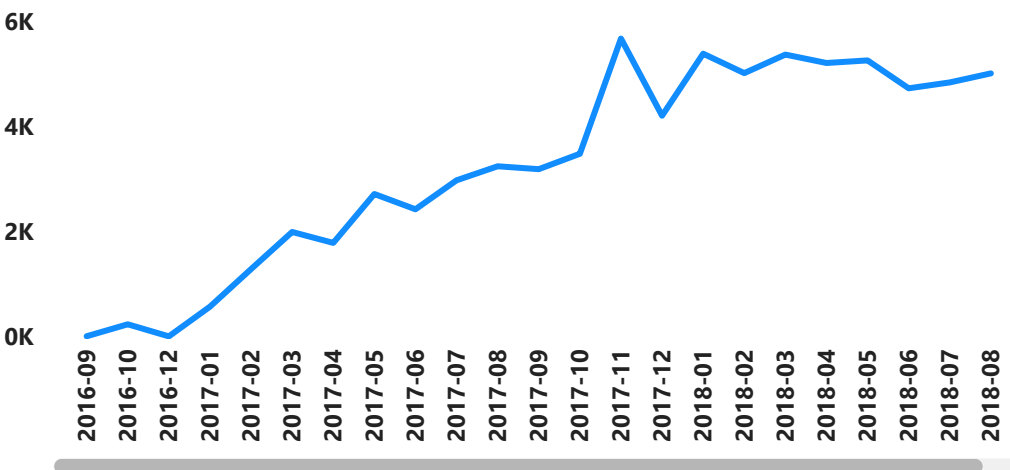

IMPLICATION

Low repeat rate means retention is weak. Without stronger customer loyalty, revenue growth may plateau as acquisition costs rise.

RECOMMENDATION

Introduce loyalty programs, personalized campaigns, or subscription models to encourage repeat purchases. Improving retention will increase lifetime value and stabilize revenue growth.
